

# INSTALLING ROCKET LAUNCHERS

## 2SKB-794

- 1. Remove the eight short allen head screws which have been pre-installed in your tackle box. Save these screws for launcher installation – you will need four of them.**
- 2. Slide the long allen head screw (provided with our launcher kit) through the end of the launcher tube with the two small holes. Slide the 'rod-stop' metal sleeve over the screw as you feed the screw through the tube as shown.**
- 3. Using the allen wrench provided, install the launcher tube into the indentation in your tackle box with the 'rod-stop' on the bottom and the larger hole facing away from the tackle box on top.**
- 4. Complete your installation by re-using four of the short allen head screws which you removed in step one. Use the large hole to insert a screw through to the back hole against the tackle box. Tighten all screws firmly. You will have four remaining short allen head screws that are not required for installation.**

**SIMPLE... ROCKET SCIENCE**
